SPACEBOX 0.1.5

What's new

October 2026 · Includes all changes since 0.1.1 (versions 0.1.2 to 0.1.5)

Highlights 10

Multiplayer
Host, LAN and dedicated servers in one game

Player-built ships
Thrusters, consoles, cannons and cameras

Gravity and oxygen
Gravity generators, sealed rooms, air supply

New world generation
Biomes, asteroid shapes, caves and ore veins

Mobs
The Mineral Parasite lives inside asteroids

Tutorials
Guided survival and creative tutorials

Equipment
Armor sets, flashlights, radars and generators

Server dashboard
Web control panel with map, rules and backups

Claims and protection
Claim beacons protect ships and bases

Modding
New GameSet editor, extensions and texture packs

Gameplay 34

- Oxygen bar; breathing uses oxygen in survival
- Compressed oxygen refills the tank
- Low oxygen narrows the view, then hurts 5 HP/s
- Gravity zones: walk, run and jump
- Drops and objects fall inside gravity
- Fall damage in gravity, based on gravity strength
- Crouch with Left Ctrl, slow walk with Left Alt
- Footsteps depend on the surface
- Smoother player physics, sliding along walls
- Jetpack boost flames
- DNA reconstructor: respawn there for 1 DNA
- DNA reconstructors work even when far away
- Spawn point; respawn moves out of blocks
- Death screen with death reason
- Player mood system
- Game time with day cycle
- Player statistics
- Player effects: damage, heal, teleport, overcharge
- Projectiles can hurt players
- Weapon recoil and armor penetration
- Hit, ricochet and explosion volume fades with distance
- Bombs: cobalt and uranium, with chain reactions
- Nuclear power blocks explode when destroyed
- Armor reduces explosion damage
- Radar needed for markers, flashlight for light
- Flashlight in hand works without an equipped one
- Drills use power and glow in their own colour
- Drills and guns hurt mobs and NPCs
- Ring marks the target to drill or gift
- Drop system with physics
- Drop items by drag and drop or from the hotbar
- Spacer NPC carries loot and a storage
- Spacer can be pushed and drops loot on death
- New game mode Explorer (no breaking or placing)

Building & Blocks 25

- Blocks can be rotated
- Magnet building mode (N)
- Multi-cell blocks with build preview
- Blocks with custom 3D shapes
- Wall torches in eight colours
- Sliding doors: aluminium, iron, titanium, metal 2x2
- Doors auto-close, build airlocks, push players
- Door sounds in three styles

- Big Window (2x2)
- Storage block; rename it, name shown on hover
- Gravity generator: radius, strength presets, on/off
- Oxygen generator fills closed rooms (water tank)
- DNA reconstructor block
- Disassembler needs power, 4x2 slots
- Ore scanner
- Repair tool repairs damaged blocks
- Item pipes: straight, merging, filter slot, side settings
- Cables turn into angles and hubs automatically
- Power blocks: Standard and Powerful Cobalt
- Power blocks: Standard and Powerful Nuclear
- Signs: Steel Sign, Wide Steel Sign, Info Panel
- Sign editor: bold, colours, alignment, text size
- Picture frames (iron, plastic; 1x1, 2x1, 2x2)
- Damaged blocks show cracks
- Barrier: invisible creative block for maps

Ships 17

- Built structures fly as ships with real mass
- Four thruster types
- Five cannons: anti-personnel to anti-frigate
- Ship console: sit down and pilot
- Bind thrusters, cannons, cameras by looking at them
- Key groups with colour outlines
- Automatic flight: move, roll, mouse steering, brake
- Speed display while piloting
- Cannon console and camera block
- Camera view looks like a security camera feed
- Ships collide with asteroids and other ships
- Players stay aboard moving ships
- Asteroids with thrusters fly too
- Thruster nozzles keep their space free
- Consoles remember the last used keys
- Ship viewer: browse and test ships of all worlds
- Export ships as `.ship` files, place them in creative

Items & Crafting 14

- New: Dense Ice Rock, Methane Ice, Compressed Methane
- New: Plastic
- Thulium processing and thulium recipes
- Armor sets: aluminium, iron, titanium
- Flashlights, radars and generators in three tiers
- Equip with Shift-click or right click
- 30 pixel-art pictures to craft
- Shift-click crafts 5 items
- New crafting categories, incl. Tools and Decor
- Processing machines list their recipes
- More crusher recycling recipes
- Cheaper metal blocks
- Items can glow
- Short descriptions; values shown in tooltips

Mobs 6

- Mineral Parasite eats asteroid blocks
- Parasites bite survival players and sometimes flee
- Live in dark medium, heavy and icy asteroids
- Own sounds and death particles
- Drop loot when killed
- Mineral Parasite Larva spawns a parasite

Generation 12

- Biomes
- Improved noise for asteroid surfaces
- Cave tunnels and round caves
- Ore veins
- Loot generation
- New asteroid shapes: blobs, doubles, donuts, craters
- Hollow asteroids
- Biomes and ores change with distance from the center
- Asteroids have random rotations
- No floating blocks on new asteroids
- New players spawn near a large asteroid
- Old worlds keep generating as before

Interface 23

- Sort button in inventory and storage
- Creative window with categories and search
- World preview in the menu
- Double click opens a world; edit button for worlds
- Loading screen with progress
- Game, audio and graphics settings
- Control remapping
- Interface font and font size
- Options in the pause menu
- Unsaved options ask before leaving
- Graphics: SSAO, brightness, contrast, saturation
- Graphics: vignette, film grain, FPS counter
- Compact equipment window with 3D player preview
- Waypoint window (M)
- Tutorial panel with tasks and rewards
- Controls overview (F6)
- Menu music toggle
- Block icons show the real shape
- Better debug console, copyable text
- Autosave option
- Save / Don't Save / Cancel when leaving a world
- Mods menu: GameSets, texture packs, ship viewer
- Readable pixel font in small windows

Multiplayer 20

- Open a single-player world to the network
- Join by address; LAN servers found automatically
- Server list with icon, description, ping, players
- Connection screen shows each join step
- Server sends its mods and texture packs
- Accounts with password; whitelist
- Choose a skin colour in the menu
- Synced: held item, flashlight, block rotation
- Synced: ships, doors, machines, mobs, drops, explosions
- Several players can use one chest or machine
- PvP with hitboxes, headshots and kill messages
- Give items and equipment to other players
- Chat with commands, Tab completion, history
- Join and leave messages
- Player list with ping; kick, mute, ban
- Other players' flashlight beams and glare
- Claim beacons protect ships and bases
- Admins can protect asteroids and ships
- Server checks items, moves and reach (anti-cheat)
- Admin commands from chat with `/`

Server & Dashboard 22

- Dedicated server with start scripts
- Runs without a window or GPU on every OS
- Web dashboard: players, console, settings, charts
- Dashboard map of space around players
- Dashboard works on phones
- Automatic HTTPS (DuckDNS, Cloudflare, IP)
- Server statistics: players per day, play time
- Gameplay rules: PvP, explosions, friendly mobs
- `keep_inventory` rule with death drops
- `max_ship_speed` rule
- `gamerule` command and dashboard switches
- Player game modes saved per player
- Admins list with `[ADMIN]` tag
- Claim settings in the config and dashboard
- Automatic world backups; `backup` command
- Sleep mode for empty servers
- Low update rate while nobody is online
- `restart` command
- `tp`, `tphere`, `setspawn`, `spawn`
- Stopping or closing the server saves the world
- Old worlds upgraded on start
- Spacebox Server Guide PDF included

Modding & GameSet editor 22

- GameSet editor for all content, with 3D previews
- Editor: biome map, tutorials, sounds pages
- Tooltips for every editor setting
- Folder format: one folder per block or item
- Extension GameSets add or patch content
- Texture packs, several at once
- Auto-unpack ZIP and RAR mods
- GameSet icon
- All items use string ids
- Data-driven mobs, game modes and tutorials
- Start items and spawn settings per GameSet

- Generation options per GameSet
- Own texture for each block side
- Disabled textures and glow maps
- Custom block models (OBJ)
- Block drops: other items, drops when shot
- Unbreakable blocks
- Custom footstep and door sounds
- Drills with radius; weapons with ammo
- Folders for projectiles and loot
- Changeable UI colours
- GameSet can override game resources

Performance 8

- Chunk meshes built on worker threads
- Worlds load on worker threads
- Hidden chunks are not drawn (occlusion culling)
- Smaller chunk meshes
- Fewer polygons in held and dropped items
- Faster joining near changed asteroids
- Asteroids save only changed chunks
- Smaller builds: unused assets left out

Engine 12

- Revamped lighting: smooth coloured voxel light
- Post processing and SSAO
- Procedural skybox
- New effects system with its own editor
- 3D audio with pitch and mixer channels
- Audio follows the system output device
- Sorted transparency for models and particles
- Scene graph, components, materials
- Networking with RPCs and synced variables
- Native Wayland on Linux
- Laptops use the dedicated GPU
- System report at the start of the log

Fixes 22

- Cursor stays locked when hidden
- Escape in the inventory
- White borders on screenshots
- Faster screenshot saving
- Missing OpenAL32.dll
- Game starts without sound if OpenAL is missing
- Transparent block faces between chunks
- Light and ambient occlusion between chunks
- Electricity system bugs
- Memory leaks: audio, skybox, meshes, shaders
- Sounds stopped after long play
- Window mode and VSync settings
- Releasing zoom ignored the FOV setting
- Time stayed paused after Go to menu
- Flashlight white screen on some drivers
- Missing taskbar icon
- Inventory slot clicks ran twice
- Crusher gave too much dust from lenses
- Crash while saving no longer breaks save files
- Broken world files no longer crash the menu
- Numpad Enter left the world without saving
- Chunks with over 256 block types save correctly

Rules for DONE.txt

For the author: how to write future entries so the next changelog is quick to build.

1. **One line per player-visible change.** Split lines that list unrelated things.
2. **Short:** about 15 words at most, a phrase, not a sentence.
3. **Final state, not history.** Edit the existing line when a feature changes in the same version.
4. **No "fix X" for new features.** Bugs in a feature added this version are not entries.
5. **Right header:** `Game` for features, `Small` for minor changes, `Fixes` for bugs in released features, `Engine` for engine work.
6. **Current version only.** Add under `Application.Version`; never edit older sections.
7. **No internal work:** refactors, tests, tooling and docs stay out.
8. **Player words:** name items, blocks, keys and menus as the game shows them.
9. **Exact names** for config fields, rules and commands, e.g. `keep_inventory`, `/backup`.
10. **No other games** and no numbers that change often; keep values in tooltips and docs.

```
Game
- picture frames: iron and plastic, 1x1 to 2x2
Small
- creative window: search field
Fixes
- cursor not locked when hidden
```
